Gravity and magnetic geophysical methods are passive. They rely on no controlled sources but seek out naturally occurring variations in the earth ' s gravity and magnetic fields. For this reason, some military uses of these surveys have long included quiet detection of submarines and volatile unexploded munitions.

Magnetic and Gravity Methods in Mineral Exploration: the ...

Gravity and magnetic methods can be directly related to physical properties of rocks, i.e. the density and the susceptibility, and are very useful to field geologists and geophysicists in the mapping and identification of various rock types. They are also used for the detection of minerals with large contrast in density and susceptibility ...

Gravity and Magnetic Methods for Geological Studies ...

Being responsive to lateral variations in rock properties, gravity and magnetic methods are best suited for detecting steep discontinuities such as faults. Seismic methods, by contrast, are best for detecting vertical rock variations and low-angle discontinuities such as layer boundaries.

• Geophysical exploration techniques that employ both gravity and magnetics are passive. By this, we simply mean that when using these two methods we measure a naturally occurring field of the earth: either the earth's gravitational or magnetic fields. Collectively, the gravity and magnetics methods are often referred to as

Geophysical Surveying Using Magnetics Methods Introduction

Gravity methods The gravity field of the Earth can be measured by timing the free fall of an object in a vacuum, by measuring the period of a pendulum, or in various other ways. Today almost all gravity surveying is done with gravimeters.

When compared to the seismic reflection method which responds best to a horizontally layered earth, the gravity and magnetic methods respond best to vertical interfaces generating lateral density and magnetisation changes, for example, across a bounding fault separating basement (high density and magnetisation) from sediment (low density and magnetisation).
